Key Pillars of China's Green Finance Policy Framework

Source: CASI Analysis

Timeline : Taxonomy and Reporting as Key Enablers

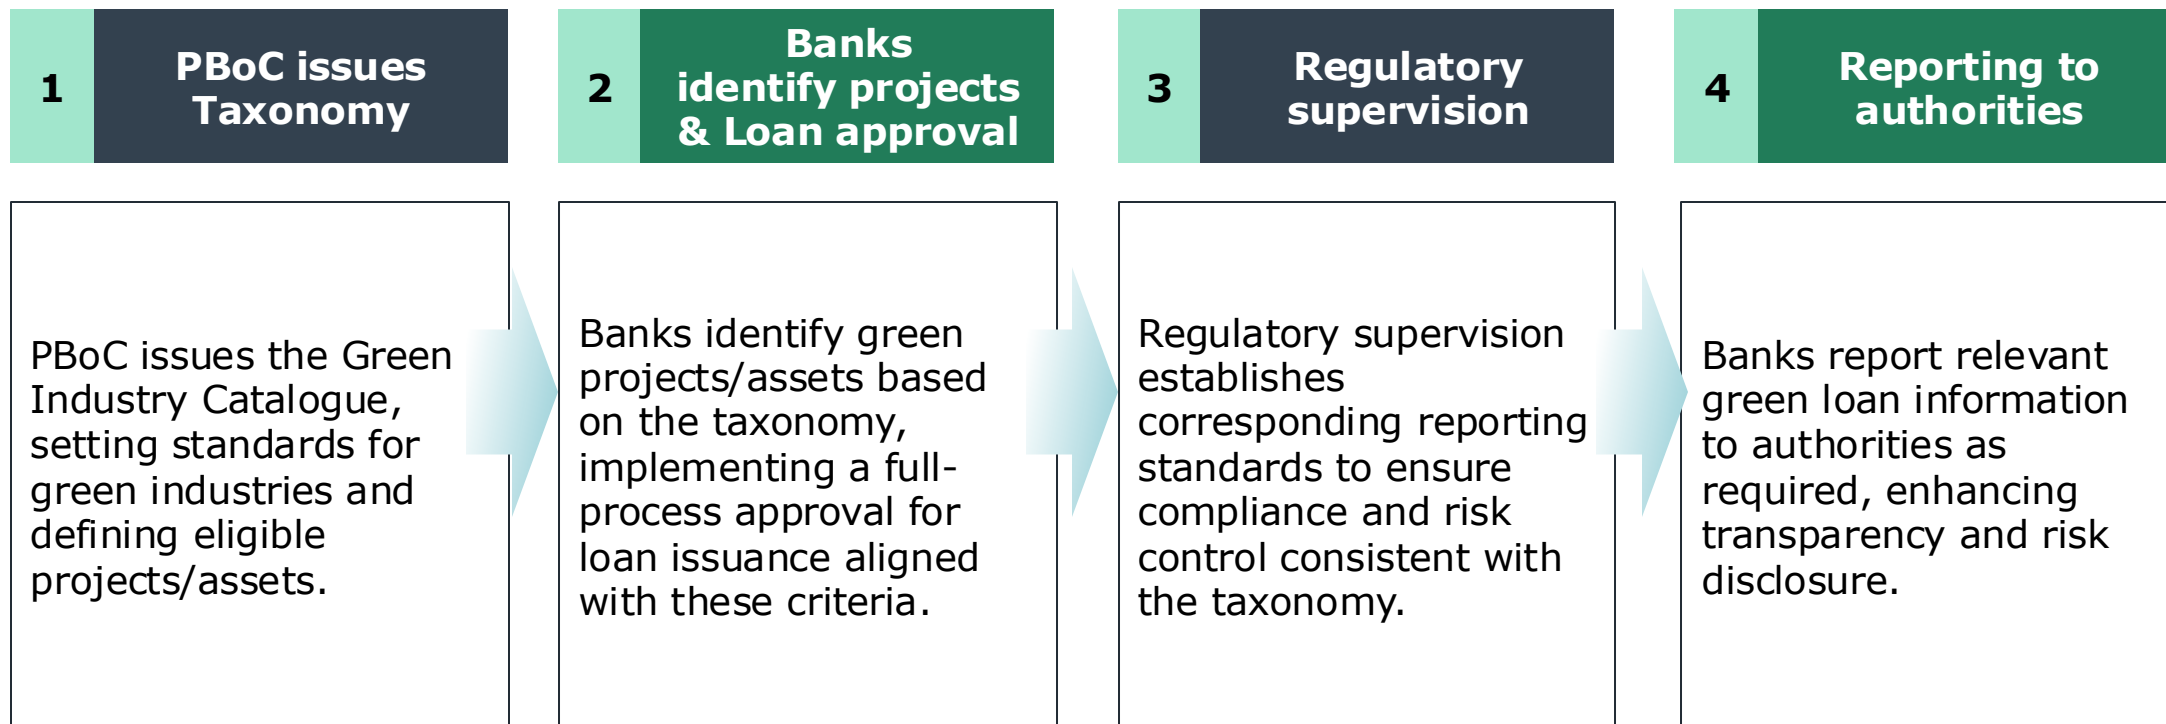

- **CBRC:** China Banking Regulatory Commission, which was restructured as China Banking and Insurance Regulatory Commission (CBIRC) in 2018 and further to the National Financial Regulatory Authority in 2023;
- **PBoC:** The People's Bank of China; **NDRC:** National Development and Reform Commission

Taxonomy-Driven Green Lending Mechanism

In China, green lending follows a top-down process:

PBoC/NDRC/NFRA issues a green taxonomy that guides banks in identifying eligible green projects or assets. Banks review, approve, and issue loans accordingly, under regulatory supervision, and may report activities to authorities.

China's Green Finance Taxonomy Update: Embracing "Decarbonization" Beyond "Green"

Green Industry Guideline Catalogue (2019 Edition)

首页 > 委工作动态

关于印发《绿色产业指导目录（2019年版）》的通知

发改环资〔2019〕293号

Three-tier classification
(7 primary, 31 secondary, and 246 tertiary categories) outlining key areas such as energy saving, carbon reduction, environmental protection, resource recycling, etc.

Green and Low-Carbon Transition Industry Guideline Catalogue (2024 Edition)

首页 > 政务公开 > 解读 > 政策解读

国家发展改革委等部门印发《绿色低碳转型产业指导目录（2024年版）》

2024/02/29 环资司

An update of the 2019 ver., refining secondary industry categories and expanding coverage of tertiary sectors.

Key Difference

1 Renaming

The updated directory name reflects a shift from "green" to emphasizing decarbonization and transition, integrating carbon neutrality goals with financial mechanisms.

2 Clarification

Industry restructuring supports clearer boundaries aligned with decarbonization and low-carbon transitions.

3 Expansion

Expanding coverage to include key emerging industries, highlights emerging industries central to China's low-carbon transition ambitions.

4 Regulation

Clearer definitions and regulations drive efficient, high-quality decarbonization efforts beyond simple green measures.

From February 2025, banks shall align their reporting with the new taxonomy

Data Standardization As a National Consensus

Five Major Financial Articles

“

A more **systematic and comprehensive** statistical framework has been developed to cover the “Five Major Financial Articles”, standardizing the scopes, indicators, definitions, data collection, sharing, disclosure, and inter-agency responsibilities

*The statistics cover a wide range of financial instruments, including loans, bonds, equity, asset management claims, funds, insurance, and derivatives, with **over 200 core indicators**.

PBoC: "Form A3327" Special statistics on green loans

Key Features

- Focus on Both Current and Previous Period Loan Balances
- Primary Classification Covers Green Loans and Loans to Enterprises with Significant Environmental and Safety Risks
- Alignment with NDRC's Green Industry Catalogue
- Inclusion of Individual Business Loans in the Reporting Scope

绿色贷款专项统计制度 Specialized statistical system for green loans				
填报机构: V全国		报表日期: 万元		
序号	指标编码	指标名称	本期余额	上期余额
1	3G001	一、绿色贷款		
2	3G002	(一)按贷款用途划分

PBoC: Revisions to the “Form A3327”

At the beginning of 2025, the PBoC revised Form A3327 for the special statistical reporting of green loans.

1

Updated green loan indicators and definitions to align with the 2024 Green and Low-Carbon Transition Product Catalogue

2

New indicators introduced for overseas green loan exposures, reflecting cross-border project financing

3

Supplementary reporting enhanced with data on:

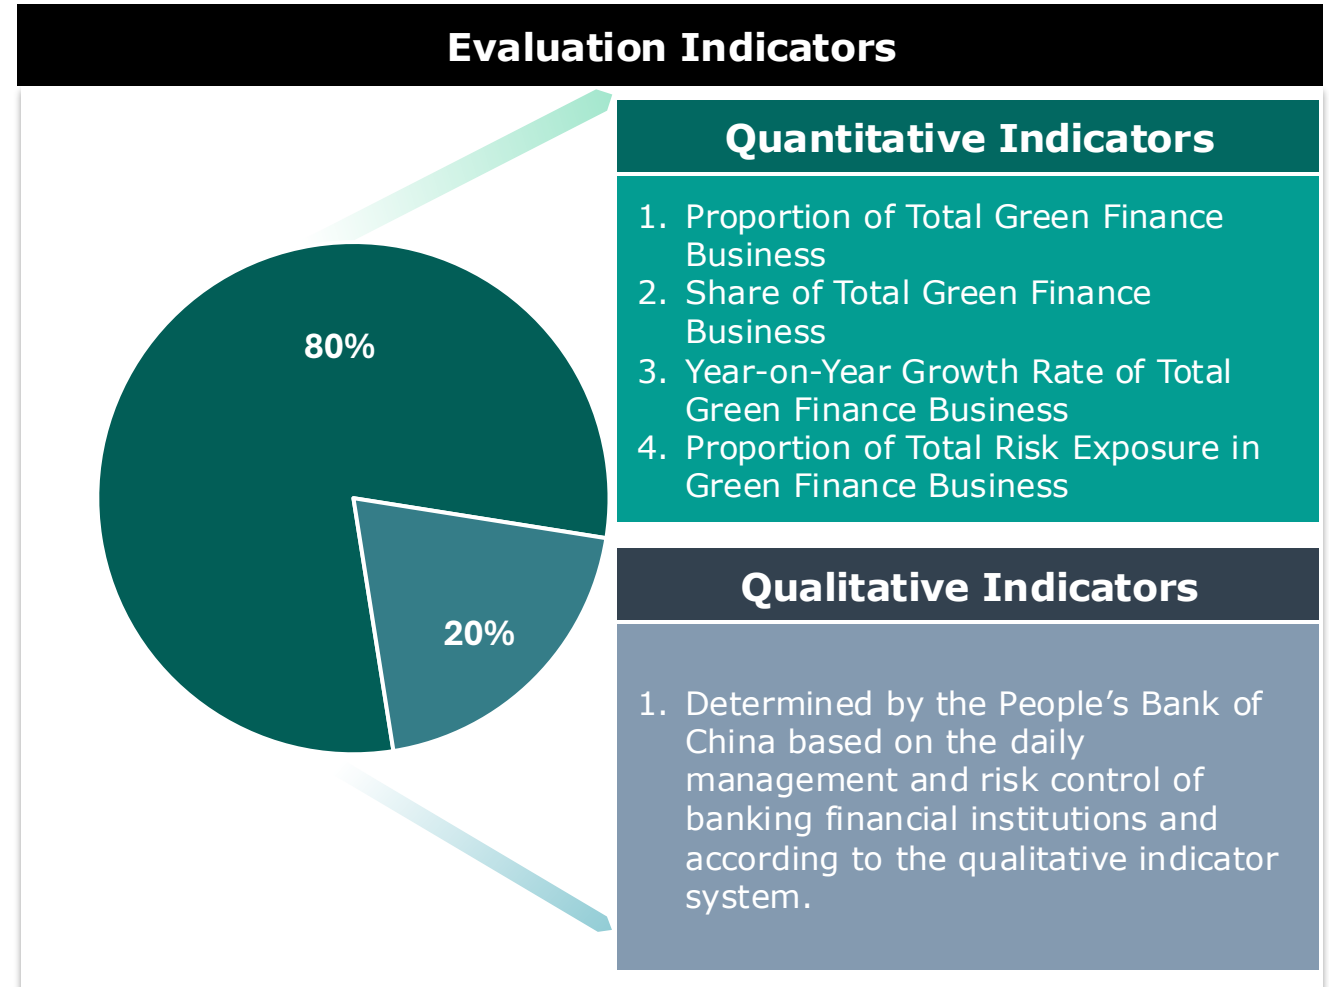

- Number of Loan Accounts
- Environmental rights-backed loans
- CO₂-equivalent emissions reductions from green loans

Source: CASI Analysis

PBoC's green finance evaluation system incentivizes banks to improve reporting

- In 2021, the PBOC released the **Green Finance Evaluation Plan** for Banking Institutions.
- The evaluation applies to **24 major banks**, including **policy banks, large state-owned commercial banks, joint-stock banks, and some city commercial banks**.
- The evaluation results are **integrated into the PBOC's institutional ratings and other policy and prudential tools, reinforcing green finance incentives**.

Banks in China are elevating ESG disclosure from regulatory duty to strategic imperative

	Governance	Strategy	Risk Management	Metrics and Targets
 中国工商银行 <small>INDUSTRIAL AND COMMERCIAL BANK OF CHINA</small>				
 中国建设银行 <small>China Construction Bank</small>				
 中国银行 <small>BANK OF CHINA</small>				
 中国农业银行 <small>AGRICULTURAL BANK OF CHINA</small>				
 交通银行 <small>BANK OF COMMUNICATIONS</small>				
 中国邮政储蓄银行 <small>POSTAL SAVINGS BANK OF CHINA</small>				

Key Findings

- Most financial institutions in China are adopting the TCFD framework, beginning with its four foundational pillars. Banks, in particular, have demonstrated strong performance in governance structures and related disclosures.
- However, disclosure remains limited in areas such as metrics and targets, reflecting a need for further capacity building and data development.

Source: CASI Analysis

Building ESG Disclosure on the Four Pillars of the TCFD

Example 4 Pillars of TCFD	Key Insights
 Governance	<ul style="list-style-type: none">• Bank of Communications has established a 'bottom-up' ESG management system with clearly defined responsibilities across governance bodies.• The Board of Directors sets the ESG strategy, while the Social Responsibility (ESG) and Consumer Advocacy Committee oversees its implementation and monitors progress toward ESG goals.
 Strategy	<ul style="list-style-type: none">• China Construction Bank's ESG agenda focuses on three strategic pillars: Green Finance Management, Comprehensive Risk Management, and Carbon Footprint Management, each with clear goals and targeted actions.• Six key tasks support the implementation of these strategies toward sustainable banking leadership.
 Risk Management	<ul style="list-style-type: none">• Industrial and Commercial Bank of China has embedded climate risk into its overall risk management framework by establishing a dedicated system.• Through a robust climate risk database and a self-developed carbon footprint management system, ICBC supports data-driven climate risk analysis and tracks emissions across its domestic operations.
 Metrics & Targets	<ul style="list-style-type: none">• Bank of China Hong Kong manages financed emissions using the PCAF standard, applying advanced modeling across seven asset classes and setting net-zero pathways for key sectors.• The bank targets carbon neutrality in operations by 2030 through a "Reduce-Replace-Offset" approach, supported by green buildings, energy upgrades, and sustainable branch design.

Gaps and Challenges in Sustainability Disclosure Practices

 Governance	 Strategy	 Risk Management	 Metrics and Targets
<p>Surface-level structures</p> <ul style="list-style-type: none"> • Most organizations have established sustainability committees. • However, many lack regular meetings or strategic focus. <p>Lack of strategic integration</p> <ul style="list-style-type: none"> • Meeting topics rarely linked to core outcomes like revenue or performance evaluation. • Governance remains experimental and disconnected from overall business strategy. • Efforts have not permeated core decision-making. 	<p>Inconsistent follow-through</p> <ul style="list-style-type: none"> • Even when sustainability strategies exist, their effectiveness is rarely reviewed. • Regular evaluations and risk-return analyses are often missing. <p>Weak performance assessment</p> <ul style="list-style-type: none"> • There is little evidence of strategic impact measurement. • Few companies demonstrate robust strategic execution or refinement. 	<p>Reactive and fragmented</p> <ul style="list-style-type: none"> • Risk management is often case-specific and event-driven, which lacks industry-wide or systemic thinking. <p>No integration with operations and lack of capacity</p> <ul style="list-style-type: none"> • Integration with pricing, planning, and operations is minimal. • Risk capabilities remain underdeveloped and siloed. <p>Limited involvement</p> <ul style="list-style-type: none"> • Frontline employees' engagement is low. • Responsibility lies with small, isolated teams with limited influence. 	<p>Narrow scopes</p> <ul style="list-style-type: none"> • Most targets focus on Scope 1 and 2 emissions. • Scope 3 - emissions across the value chain—is often ignored. <p>Lack of transparency</p> <ul style="list-style-type: none"> • Public disclosures are rare, reducing accountability. <p>Limited impact</p> <ul style="list-style-type: none"> • Weak coverage of emissions undermines the credibility of sustainability strategies. • Metrics are not used to drive meaningful performance improvement.
